

ENERGY WASTE IN BUILDINGS TODAY

According to the U.S. Department of Energy (DOE), leaky ductwork is one of the biggest contributors to energy waste in buildings today. Duct Sealing is a simple solution to this costly problem. A building's energy consumption can be significantly reduced by sealing the air ductwork using this technology. In fact, the DOE now ranks duct sealing as one of the most effective strategies for reducing energy costs.

BUILDING FAULTS	ANNUAL COST
Duct Leakage	\$2.9B
HVAC left on when unoccupied	\$1.9
Lights left on when unoccupied	\$1.7
Airflow not balanced	\$0.7
Improper refrigerant charge	\$0.7
Dampers not working properly	\$0.5
Insufficient evaporator airflow	\$0.3
Improper controls set up	\$0.2
Control component failure	\$0.2
Software programming errors	\$0.1
